porcher **SPORT**

everlast double coating

The special double-coated Skytex cloth **EVERLAST** was developed in co-operation with **Porcher Sport** and **Gradient's** development team. Our target was to develop a very durable paragliding cloth that keeps its shape and stability in all directions, including radial and diagonal strength. Durability is a priority in **Porcher's sport** product range and **Gradient** intensively tested **EVERLAST** on the Nevada and Golden4 prototypes for eight months. The gliders were used by expeditions in very difficult weather and flying conditions with excellent results. We are now extremely proud to be able to bring this material exclusively to **Gradient** customers. The new Golden4 is the first glider to use **EVERLAST** along the leading edge, after which **EVERLAST** will be used in the development of all new **Gradient** gliders. **EVERLAST** is an exclusive **Gradient** cloth made by **Porcher Sport**.
